**Candidate Statement:**

I co-manage the contact dermatitis clinic at Stanford, and areas of interest include contact dermatitis and atopic dermatitis. I am particularly interested in education, and am currently working to create ACD teaching modules via a Sulzberger grant, on behalf of the ACDS. I have published in peer-reviewed journals, co-edited a textbook on metal allergy, and regularly speak at national meetings. It would be an honor to give back to the ACDS and promote our subspecialty.
